Products.json(data) 73

Uvod

- Korišćeni Programski jezici

- Za izradu sajta korišćeni su HTML5 i CSS3 za strukturu i stilizaciju stranica, JavaScript za dinamičke funkcionalnosti i validaciju formi, kao i jQuery biblioteka za lakše upravljanje DOM elementima i AJAX pozive. Za ikonice je korišćen Font Awesome, dok je razvoj realizovan u Visual Studio Code okruženju i testiran u modernim web pregledačima.

- Funkcionalnosti

1. Dinamička navigacija(Responsive Menu)

```
// Navigacija
function initNavigation() {
    const navToggle = document.querySelector('.nav-toggle');
    const navMenu = document.querySelector('.nav-menu');
    if (navToggle && navMenu) {
        navToggle.addEventListener('click', () =>
navMenu.classList.toggle('active'));
    }
}
```

Implementiran je interaktivni navigacioni meni koji se prilagođava mobilnim uređajima. Funkcionalnost uključuje "hamburger" taster koji otvara meni, automatsko zatvaranje menija nakon odabira linka, kao i pametno zatvaranje menija klikom bilo gde van navigacione zone (Event Delegation).

2. Asinhrono učitavanje podataka (AJAX & JSON)

```
function loadFeaturedProducts(container) {

    container.innerHTML = `
        <div class="loading" style="grid-column: 1 / -1;">
            <div class="spinner"></div>
            <p>Učitavanje proizvoda...</p>
        </div>
    `;

    // Ajax
    const xhr = new XMLHttpRequest();
```

```
    xhr.open('GET', 'data/products.json', true);

    xhr.onreadystatechange = function() {
        if (xhr.readyState === 4) {
            if (xhr.status === 200) {
                try {
                    const data = JSON.parse(xhr.responseText);
                    const featuredProducts = data.products.filter(product =>
product.featured);
                    displayProducts(featuredProducts, container);
                } catch (error) {
                    container.innerHTML = '<p style="grid-column: 1 / -1; text-
align: center;">Greška pri učitavanju podataka.</p>';
                    console.error('JSON parsing error:', error);
                }
            } else {
                container.innerHTML = '<p style="grid-column: 1 / -1; text-align:
center;">Greška pri učitavanju proizvoda.</p>';
            }
        }
    };

    xhr.onerror = function() {
        container.innerHTML = '<p style="grid-column: 1 / -1; text-align:
center;">Greška pri povezivanju sa serverom.</p>';
    };

    xhr.send();
}
```

Centralni sistem za prikaz proizvoda koristi XMLHttpRequest za asinhrono dobavljanje podataka iz eksternog products.json fajla. Ovim je postignuto razdvajanje podataka od prezentacionog sloja, što omogućava lakše ažuriranje kataloga odela bez izmene HTML koda.

3. Dinamičko generisanje sadržaja (DOM Manipulation)

```
function createProductCard(product) {
    const oldPriceHtml = product.oldPrice ? `<span class="old-
price">${formatPrice(product.oldPrice)}</span>` : '';
    return `
        <article class="product-card">
            <div class="product-image">
                <img src="${product.image}" alt="${product.name}">
```

```
                ${product.badge ? `<span class="product-
badge">${product.badge}</span>` : ''}
            </div>
            <div class="product-info">
                <h3 class="product-name">${product.name}</h3>
                <p class="product-price">${oldPriceHtml}
${formatPrice(product.price)}</p>
                <button class="btn-add-to-cart"
onclick="addToCart(${product.id})">
                    <i class="fas fa-shopping-bag"></i> Dodaj u korpu
                </button>
            </div>
        </article>
    `;
}
```

Funkcija za prikaz proizvoda dinamički kreira HTML strukturu (kartice proizvoda) na osnovu podataka iz JSON-a. Implementirano je i automatsko formatiranje valute (RSD) prema lokalnim standardima korišćenjem toLocaleString metode.Prikaz proizvoda

4. Filtriranje, pretraga i sortiranje

```
function applyFilters() {
    const cat = document.getElementById('category-filter')?.value || 'sve';
    const sort = document.getElementById('sort-filter')?.value || 'default';
    const search = document.getElementById('search-
input')?.value.toLowerCase().trim() || '';

    let result = allProducts.filter(p => {
        const matchCat = cat === 'sve' || p.category === cat;
        const matchSearch = p.name.toLowerCase().includes(search) ||
p.description.toLowerCase().includes(search);
        return matchCat && matchSearch;
    });

    if (sort === 'price-asc') result.sort((a, b) => a.price - b.price);
    else if (sort === 'price-desc') result.sort((a, b) => b.price - a.price);
    else if (sort === 'name-asc') result.sort((a, b) =>
a.name.localeCompare(b.name));
    else if (sort === 'name-desc') result.sort((a, b) =>
b.name.localeCompare(a.name));

    filteredProducts = result;
    visibleCount = INITIAL_COUNT;
```

```
    displayProducts('all-products');
}
```

Na stranici prodavnice omogućena je napredna obrada podataka na strani klijenta. Korisnik može filtrirati odela po kategorijama, pretraživati bazu po ključnim rečima (ime ili opis) i sortirati asortiman po ceni ili abecednom redu.Dodavanje u korpu(toast notifikacija)

5. Validacija formi (Regex i Logika)

```
function initContactForm() {
    const form = document.getElementById('contact-form');
    const msgBox = document.getElementById('form-message');
    if (!form || !msgBox) return;

    form.addEventListener('submit', (e) => {
        e.preventDefault();

        // Prikupljanje svih vrednosti iz forme
        const name = document.getElementById('name').value.trim();
        const email = document.getElementById('email').value.trim();
        const phone = document.getElementById('phone').value.trim();
        const subject = document.getElementById('subject').value;
        const message = document.getElementById('message').value.trim();

        // REGEX DEFINICIJE
        // Ime i Prezime: Dve reči, svaka počinje velikim slovom, min 2 slova
(npr. Petar Petrović)
        const nameRegex = /^[A-Za-zČčĆćŽžŠšĐđ\s]{3,50}$/;
        // Telefon: Prihvata 06x... ili +3816x... (9 do 11 cifara ukupno)
        const phoneRegex = /^(\+381|0)6[0-9]\s?[0-9]{3}\s?[0-9]{3,4}$/;
        // Email: Standardni format
        const emailRegex = /^[a-zA-Z0-9._%+-]+@[a-zA-Z0-9.-]+\.[a-zA-Z]{2,}$/;

        const messageRegex = /^.{10,500}$/s;

        let errors = [];

        // 1. Provera Imena i Prezimena
        if (!nameRegex.test(name)) {
            errors.push("Ime i prezime moraju početi velikim slovom (npr. Petar
Petrović).");
        }
```

```
        // 2. Provera Email-a
        if (!emailRegex.test(email)) {
            errors.push("Unesite ispravnu email adresu.");
        }

        // 3. Provera Telefona (opciono polje, ali ako se unese mora biti
ispravno)
        if (phone !== "" && !phoneRegex.test(phone)) {
            errors.push("Format telefona nije ispravan (npr. 0641234567).");
        }

        // 4. Provera Teme (Select polje)
        if (subject === "") {
            errors.push("Molimo izaberite temu poruke.");
        }

        // 5. Provera Poruke (Minimalno 10 karaktera da ne bi slali prazno)
        if (!messageRegex.test(message)) {
    errors.push("Poruka mora imati između 10 i 500 karaktera.");
        }

        // LOGIKA PRIKAZA PORUKE
        msgBox.className = "form-message active"; // Resetujemo klase i dodajemo
'active'

        if (errors.length === 0) {
            // USPEH
            msgBox.textContent = "Poruka uspešno poslata! Javićemo vam se
uskoro.";
            msgBox.classList.add('success');
            msgBox.classList.remove('error');
            form.reset(); // Brišemo podatke iz forme
        } else {
            // GREŠKA - Prikazujemo prvu grešku iz niza radi preglednosti
            msgBox.textContent = errors[0];
            msgBox.classList.add('error');
            msgBox.classList.remove('success');
        }

        // Automatsko sklanjanje poruke nakon 5 sekundi
        setTimeout(() => {
            msgBox.classList.remove('active');
        }, 5000);
    });
}
```

Implementirana je provera ispravnosti podataka pre slanja kontakt forme i newsletter prijave. Koristi se Regular Expression (Regex) za proveru formata email adrese, dok se za ostala polja proverava minimalna dužina karaktera kako bi se osigurao kvalitet unosa.

6. Korisnički efekti(Smooth Scroll & Header efekat)

```
// Smooth scroll za ankor linkove
document.querySelectorAll('a[href^="#"]').forEach(anchor => {
    anchor.addEventListener('click', function(e) {
        e.preventDefault();
        const target = document.querySelector(this.getAttribute('href'));
        if (target) {
            target.scrollIntoView({
                behavior: 'smooth'
            });
        }
    });
});

// Skrol efekat za header
window.addEventListener('scroll', function() {
    const header = document.querySelector('.header');
    if (header) {
        if (window.scrollY > 100) {
            header.style.boxShadow = '0 4px 20px rgba(0, 0, 0, 0.1)';
        } else {
            header.style.boxShadow = '0 2px 10px rgba(0, 0, 0, 0.05)';
        }
    }
});
```

Za poboljšanje vizuelnog identiteta sajta, implementiran je Smooth Scroll za unutrašnje linkove koji omogućava glatko kretanje kroz stranicu, kao i dinamička promena stila zaglavlja (Header) prilikom skrolovanja radi bolje preglednosti.

7. LocalStorage(Korpa)

```
function renderFullCart() {
    const container = document.getElementById('cart-table-container');
    if (!container) return;

    const cart = JSON.parse(localStorage.getItem(CART_KEY)) || [];

    if (cart.length === 0) {
```

```
        container.innerHTML = `
            <div class="text-center cart-empty-msg">
                <p>Vaša korpa je trenutno prazna.</p>
                <a href="proizvodi.html" class="btn btn-primary">Idi u
prodavnicu</a>
            </div>`;
        return;
    }

    let total = 0;
    let html = `
        <table class="cart-table">
            <thead>
                <tr>
                    <th>Proizvod</th>
                    <th>Cena</th>
                    <th>Količina</th>
                    <th>Ukupno</th>
                    <th>Ukloni</th>
                </tr>
            </thead>
            <tbody>`;

    cart.forEach(item => {
        const itemTotal = item.price * item.quantity;
        total += itemTotal;
        html += `
            <tr>
                <td class="cart-product-cell">
                    <img src="${item.image}" alt="${item.name}" class="cart-img">
                    <span class="cart-product-name">${item.name}</span>
                </td>
                <td class="price-font">${formatPrice(item.price)}</td>
                <td>
                    <div class="qty-controls">
                        <button class="btn-qty"
onclick="changeQuantity(${item.id}, -1)">-</button>
                        <span class="qty-number">${item.quantity}</span>
                        <button class="btn-qty"
onclick="changeQuantity(${item.id}, 1)">+</button>
                    </div>
                </td>
                <td class="price-font">${formatPrice(itemTotal)}</td>
                <td>
```

```
                    <button class="btn-remove"
onclick="removeFromCart(${item.id})">
                        <i class="fas fa-trash-alt"></i>
                    </button>
                </td>
            </tr>`;
    });

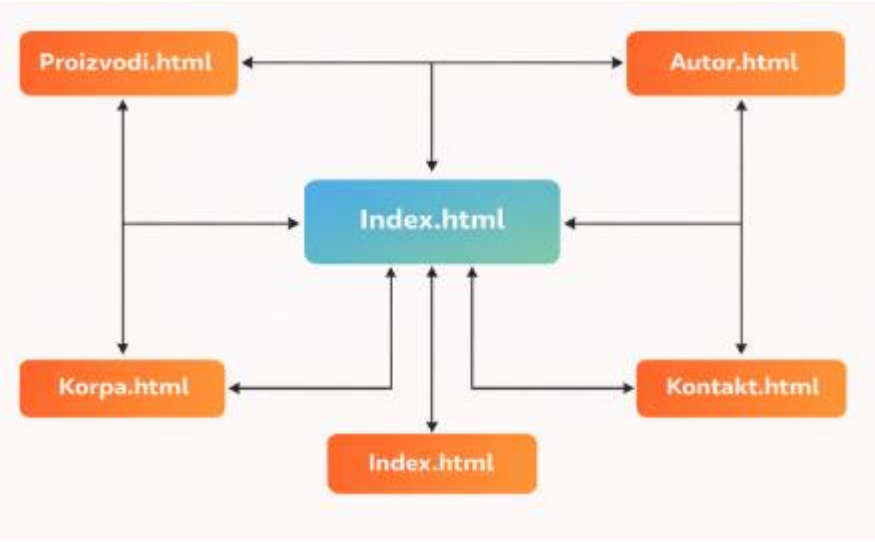
    html += `
            </tbody>
        </table>
        <div class="cart-summary">
            <h2 class="price-font">Ukupno: ${formatPrice(total)}</h2>
            <button onclick="processOrder()" class="btn btn-primary btn-
checkout">ZAVRŠI KUPOVINU</button>
        </div>`;

    container.innerHTML = html;
}
```

2. Organizacija

- Organizaciona šema

Sve stranice su međusobno povezane, takođe na početnoj strani(index.html) možemo opet da osvežimo stranicu tako što kliknemo na logo(zato imamo 2 puta index.html).



- Mapa sajta

```xml
<?xml version="1.0" encoding="UTF-8"?>
<urlset xmlns="http://www.sitemaps.org/schemas/sitemap/0.9">
  <url>
    <loc>https://ngbusiness.github.io/EleganceSuits/index.html</loc>
